

Service

# dhs-Consulting

The dhs Image Data Base is a **management system** used to permanently, flexibly and securely manage and store all **images** and image-related data.

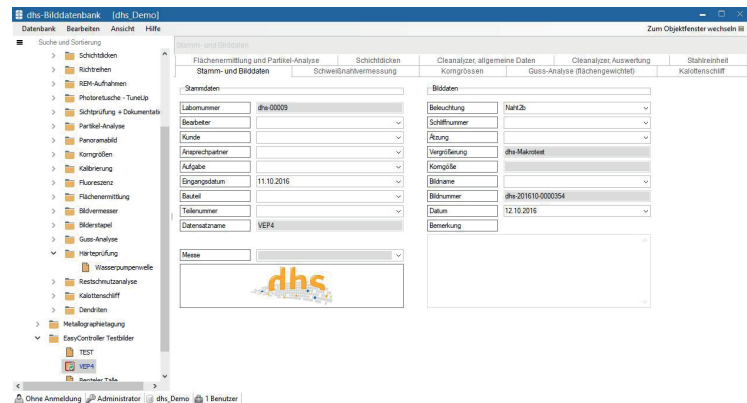

For **well-organised data management** it is important to define a **content concept** for data tree, data fields and data screens.

## Advantages:

- **Optimisation for data queries**
- **Clarity/transparency** (also in multi-user mode)
- **Accurate image data transfer for reporting** at the end of the workflow

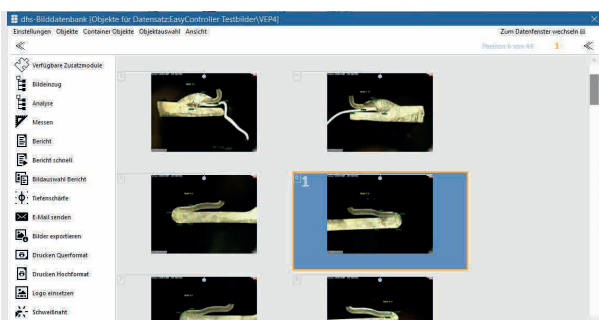

Our specialists adapt your individual data fields and data screens within the dhs consulting

This is best done **prior to installation** so that our technician can then load your custom data base on the day of installation. As a result, **commissioning** begins in the **department-specific environment**.

## Information in the overview

- **Creating your individual data screens and data fields**
- **Start-up can be activated with the department-specific data environment**
- **Adjustments can be carried out at any time (also during operation)**
- **User interface analogue to your workflow**

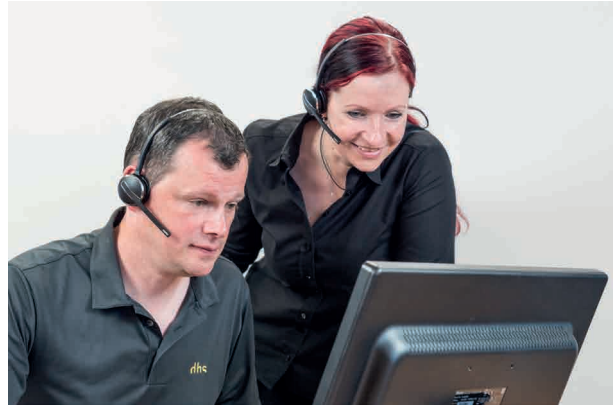

Your data base structure can still be optimised at any time **even after installation** has taken place.

Simply contact us!

Our specialists will implement your individual concept – for optimum utilisation and management of all image-related data.

**Even individual programming** for data management is possible on request!
